

Evolve™ Soft Bait in Tamper-Resistant Bait Station

1. PLACE STATIONS

- Place bait stations in known feeding areas (e.g., dumpsters, animal feed, loose trash, etc.), in active areas, and along routes where they will intercept bait.
- When possible, utilize areas where previous baiting has been successful (keep bait stations at least 10 feet away from lethal methods).

NOTE: Do not place bait in same station as lethal baits or traps. Avoid placing bait in stations that previously contained rodenticide. Clean station thoroughly to remove remnants or scent of rodenticides if reusing stations.

2. DEPLOY EVOLVE

- Place 2 to 12 pieces of Evolve in the station compartment.
- (Optional) To secure bait, skewer onto rods/spikes to keep in place.

3. MONITOR

- Add more Evolve (up to 12 pieces) if bait has been completely consumed between service visits to ensure a constant supply.
- Add a second bait station if more than 12 pieces are needed.
- If consumption is repeatedly low or ceases, try relocating the bait station to a different location.

4. MAINTAIN

- Replenish as often as needed to maintain uninterrupted supply of bait for optimal performance.
