

Protecta EVO Express® for **Ultimate Bait System™**

1. PLACE STATIONS

- Place bait stations where rats are known to be feeding (e.g., dumpsters, animal feed, loose trash, etc.), in active areas, and along routes used by rats where they will intercept bait.
- When possible, utilize areas where previous baiting has been successful (keep bait stations at least 10 feet away from lethal methods).

NOTE: Do not place bait in same station as lethal baits or traps. Avoid placing bait in stations that contained rodenticide if rats are bait averse. Clean station thoroughly to remove remnants or scent of rodenticides if reusing stations.

2. DEPLOY CONTRAPEST

- Place one (1) Ultimate tank and tray in the station(s) on either the left or right side.

3. MONITOR

- Add a second Ultimate tank and tray if the bait is emptied between service visits to ensure a constant supply.
- If consumption is repeatedly low or ceases, try relocating the bait station to a different location.

4. MAINTAIN

- Replace ContraPest monthly or more frequently as needed if consumption is high for optimal performance.
